

PHEPREN and The Global Health Network invite you to a seminar:

Beyond 'good enough': How to engage communities with COVID-19 research quickly and effectively

Response to COVID-19 requires rapid research to develop vaccines, treatments and other kinds of urgently needed knowledge. Previous public health emergencies have demonstrated that good community engagement helps move research forward, ensures it is feasible, relevant, and accepted, and that its findings are taken up. But how can it be done quickly, and in the midst of lockdowns? On this webinar we will explore these questions, and hear from the experts how to bring Good Participatory Practices to COVID-19 research.
